Good morning David,

I did not wish to assume you were working on the drawing file for this now that we have worked out the issue with the 12" worktop next to the 36S-6BN. So I am following up with the request for the drawing if it is not already in the queue/works. Unfortunately, we need it today if at all possible.

Attached is my revised quote where I plugged in the 48S-SEFAAD. Drawings are attached again for quick reference. The filename you used on the first pass when the issue was realized is VH-LOCKH # 1.

If you have any questions or need anything else, please let me know.

Thank you.

Thank you, Josh.

ROXANNE: What price should we use to quote this to Next Step Design?

Thank you.

48S-SEF(TBD) would be best. Advise the left-to-right and we can set it up.

@Josh,

Long/Short: They want a 12-SEFAAA (12" work top-cabinet base) next to a 36S-6BN.

Question: Will the 12-SEFAAA be ok to stand/sit next to the 36S-6BN with no issues? *OR* should we do a special 48S-6BN with Work Top (SEF)?

Additionally, we can ask them to bolt the two units together in the field at installation for stability.

Thank you,

Roxanne Holt (she/her)

[EXTERNAL]

Hello Roxanne,

I am hoping you can assist me with this one. David called me about this drawing request because he advised that the 12" worktop we quoted here is for an electric range and therefore will not work with the gas range Next Step Design specified. In addition to the two (2) documents we shared with David, attached is the original spec document we received from Next Step where they specifically asked for the EV12-SEFAAB.

This project is a Cordish project and we have been guided by Next Step Design that we are to use Endurance products whenever possible for the Vulcan spec. David advised that the 12" worktop cannot be a stand-alone and needs to be

secured to the range but the one Next Step requested will not work. David thought we might be able to quote a 48" unit for stability that would have the 36" range and then a 12" worktop but he suggested I contact you for guidance on how we could quote it. He stated the 18" worktop we quoted is fine on its own. Any suggestions?

If it is easier to discuss, please feel free to call me at 301-762-3710 ext. 1000.

Thank you!

Good afternoon David,

Please provide a drawing for Next Step Design in their format (plan view, isometric, elevation and utilities specs including total BTU per line up) for their project PBR and Lockhart Smokehouse. Attached are a PDF file with the quoted equipment highlighted in red and a copy of our quote for the equipment spec. The drawing file is needed by COB 12/15/21 or sooner.

If you have any questions or need anything else, please let us know.

Thank you.
